Abstract

Drugs, in particular, pyrazole derivatives represented by the following general formula (I) which have a calcium release-dependent calcium channel inhibitory effect and medicinal compositions, in particular, calcium release-dependent calcium channel inhibitors containing the above compounds as the active ingredient,

$$\begin{array}{c|c} N \\ \hline D \\ \hline \end{array} \begin{array}{c|c} CH_2 \\ \hline \end{array} \begin{array}{c|c} B \\ \hline \end{array} X - A(1)$$

(in the formula, each symbol has the following meaning:
B: phenylene, a nitrogen-containing, divalent, saturated
ring group, or a monocyclic, divalent heteroaromatic ring
group which may be substituted with Alk,

 $X: -NR^1-CR^2R^3-$, $-CR^2R^3-NR^1-$, $-NR^1-SO_2-$, $-SO_2-NR^1-$ or $-CR^4=CR^5-$, and

A: benzene ring which may have one or more substituents; mono-, di- or tricyclic fused heteroaryl which may have one or more substituents; cycloalkyl which may have one or more substituents; a nitrogen-containing, saturated ring group which may have one or more substituents; lower alkenyl which may have one or more substituents; lower alkynyl which may have one or more substituents; or Alk which may have one or more substituents).
